Portraits:

In this project you'll be designing a portrait based on a photograph. The photo reference will provide "landmarks" to guide you in placing the various facial features, shadows & highlights, and the facial expression. You can use a photo of yourself, a friend, a celebrity, or an animal.

Requirements:

- Use a high-resolution photo for your original image.
- Design can be realistic or stylized—or both.
- Include gradients in a portion of the illustration.
- Illustration should focus on the face (not full body).
- Eyes should be rendered detailed & realistically.
- A background is not mandatory, but adds interest.
- There will be a first-draft, plus a revised version.
- Save your work as an .ai (Adobe Illustrator) file.
